

Algebra I Module Index

Prerequisite Map

How to Use This Index

Use the modules in order when rebuilding foundations. Use individual modules as quick reference sheets before practice, quizzes, or corrections.

Module Sequence

Order	Module	Main Skills
1	Foundations	Arithmetic structure, signed numbers, fractions, exponents, radicals, evaluating and simplifying expressions
2	Linear Equations	Multi-step equations, distributive property, variables on both sides, literal equations, absolute value equations
3	Inequalities	One-variable inequalities, compound inequalities, interval notation, absolute value inequalities
4	Proportional Relationships	Ratios, unit rates, percent change, direct variation, slope as rate of change
5	Linear Functions	Slope, intercepts, graphing lines, slope-intercept, point-slope, standard form
6	Systems	Graphing, substitution, elimination, interpreting intersections
7	Exponents and Radicals	Exponent rules, scientific notation, square roots, simplifying radicals, rational and irrational numbers
8	Polynomials Intro	Polynomial operations, special products, GCF, trinomial factoring
9	Quadratics	Factoring, pure quadratics, quadratic formula, vertex form, graph features, applications
10	Functions and Modeling	Function notation, domain and range, tables, arithmetic sequences, simple exponential growth
11	Statistics and Probability	Center, spread, box plots, two-way tables, probability, compound probability

Prerequisite Flow

Foundations → Equations → Inequalities → Proportional Relationships → Linear Functions

Linear Functions → Systems → Polynomials → Quadratics

Functions and Modeling → Statistics and Probability

Readiness Checks

- Before linear functions: know equation solving, slope, and graph coordinates.

- Before systems: know how to graph and write linear equations.
- Before quadratics: know factoring, square roots, and function features.
- Before statistics and probability: know fractions, decimals, percents, and table interpretation.
